

# GRAPHING LINEAR EQUATIONS REVIEW

## 1. slope-intercept

$$y = ax + b \leftarrow y\text{-intercept}$$

slope

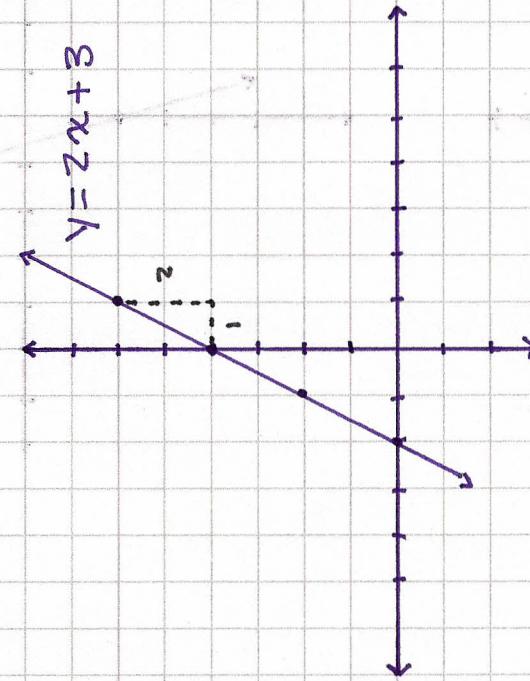

$$y = 2x + 3$$

- start at y-int.

- use slope to find next point

$$\frac{\Delta y}{\Delta x} = 2$$

$$y = 2x + 3$$

## a. Intercept

$$2x + 5y = 10$$

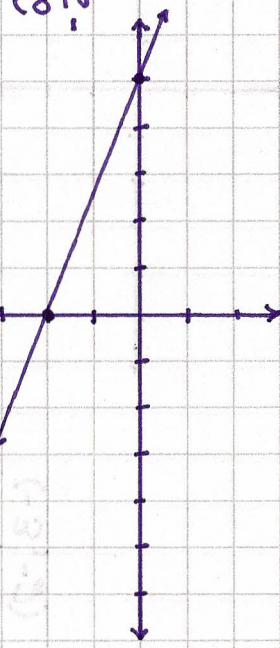

- when 'x' is 0 'y' is ?
- when 'y' is 0 'x' is ?
- Plot Intercepts

<u>x</u>	<u>y</u>
0	2
5	0

OR

- Rearrange  $y = ax + b$

$$\begin{aligned} 2x + 5y &= 10 \\ -2x &\quad -2x \\ \hline 5y &= -2x + 10 \\ \hline y &= -\frac{2}{5}x + 2 \end{aligned}$$

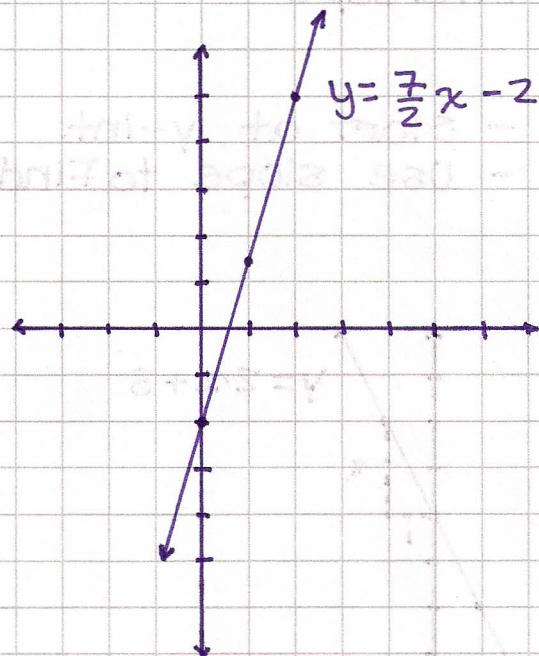

# GRAPHING LINEAR EQUATIONS

## 3. Table / Pick two points

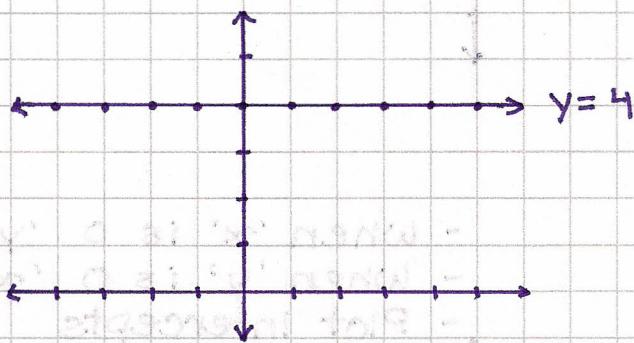

$$y = \frac{7}{2}x - 2$$

- when 'x' is ?, 'y' is ?

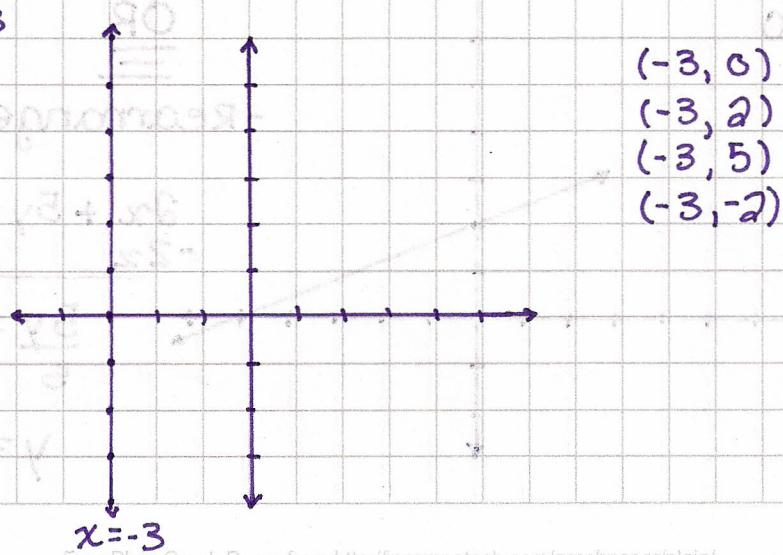

x	y
0	-2
1	1.5

Ex//  $y = 4$

Ex//  $x = -3$

- (-3, 0)
- (-3, 2)
- (-3, 5)
- (-3, -2)
