

19.

$$a) x^2 + \boxed{11}x + \textcircled{10}$$

7

$$\begin{array}{r} 10 \\ 1 \quad 10:11 \\ 2 \quad 5:7 \end{array}$$

$$14. c) x^2 + \underline{12x} \textcircled{-28}$$

$$\begin{array}{r} -28 \\ - \quad -28 \\ - \quad 28 \\ 2 \quad -14 \\ \textcircled{-2 \quad 14} \end{array}$$

$$= (x - 2)(x + 14)$$

\* check

1) FOIL

2) Distributive Property  $x^2 - 2x + 14x - 28$

3) Rectangle diagram  $x^2 + 12x - 28$

	$x$	$-2$
$x$	$x^2$	$-2x$
$14$	$14x$	$-28$

# Factoring Review

- Algebra tiles

- rectangle  $\rightarrow$  factors = length  $\times$  width

- equal groups.

- Common factoring

- "take out" GCF =  $5x + 20 = 5(x + 4)$

- Trinomials  $ax^2 + bx + c$

$a=1$   
 $x^2 + 5x + 6 = (x+2)(x+3)$   
factors of 'c' that add to 'b'

# 3.6 Polynomials of the Form $ax^2 + bx + c$

$a \neq 1$

Area Model  $2x^2 + 5x + 3 = (2x + 3)(x + 1)$  multiplication sentence

$2x$	$3$	
$2x^2$	$3x$	$x$
$2x$	$3$	$1$

Area Model

	$3x$	$-1$
$2x$	$6x^2$	$-2x$
$1$	$3x$	$-1$

$$6x^2 - 2x + 3x - 1$$

$$6x^2 + x - 1 = (3x - 1)(2x + 1)$$

Factoring by Decomposition;  $3x^2 + 4x + 1$

Is there a common factor? No  
\* use decomposition (we will breakdown the bx term) multiply

$3x^2 + 4x + 1$  →  $3 \cdot 1 = 3$   
factors of 3 that add to 4.

$3x^2 + 3x + x + 1$  (3 & 1)

\* arrange the decomposed term so that you can group with a common factor.

$3x(x+1) + 1(x+1)$   
 $= (x+1)(3x+1)$

\* check.  
 $3x^2 + x + 3x + 1$   
 $3x^2 + 4x + 1$  ✓

Factor:  $2x^2 + 13x + 15$

$2 \cdot 15 = 30$   
factors of 30

1	30
2	15
<u>3</u>	<u>10</u>
5	6

$$2x^2 + 10x + 3x + 15$$

$$2x(x + 5) + 3(x + 5)$$

$$= (x + 5)(2x + 3)$$
